

SAP Business One® offers the complete package

Manufacturers of protective products for the aquaculture industry, Steen-Hansen, teamed up with BitPeople to implement SAP Business One. Both planning and production are now more efficient than ever before, across every department.

Before: Challenges and Opportunities

- Steen-Hansen's previous software was not set up for planning, or able to process any production data.
- As a fast-growing company, Steen-Hansen required new software to increase production efficiency, while also providing a better overview of the purchase process.

Why SAP Business One and BitPeople

- SAP Business One and BitPeople was the perfect combination to help with Steen-Hansen's production requirements.
- BitPeople helped to implement the Beas Manufacturing add-on, and brought in a team member who is an expert in Beas to assist Steen-Hansen with the implementation and help the staff use this new module

After: Value-Driven Results

- Thanks to SAP Business One and the Beas module, Steen-Hansen now has greater control of their operations, including production, warehousing and planning.
- Products are now produced more efficiently.
- Forecasts are more accurate, which makes the purchasing department's job easier as they can always see what materials they need to stock.
- Reports can be specially produced by BitPeople for Steen-Hansen's management, leaving the rest of the team to focus on growth and keeping their customers happy.

Steen-Hansen

"SAP Business One and BitPeople provide us with the **possibility to grow and improve** both our profitability and customer satisfaction."
