

A healthy business starts with **SAP Business One**[®]

VESO, an animal and aquaculture pharmaceutical company, has worked with BitPeople to implement SAP Business One since 2005. Over the past 15 years, VESO has seamlessly connected all departments and streamlined processes.

Before: Challenges and Opportunities

- VESO had no internal IT resources, so decisions were being made without any IT oversight.
- New software was required that could handle different modules in one system e.g. finance, logistics and warehousing.

Why SAP Business One and BitPeople

- SAP Business One provided a safe, scalable platform.
- BitPeople had the most SAP Business One knowledge in Norway, and could offer valuable packages and add-ons.
- BitPeople also made it easy for VESO to make changes to SAP Business One fast, without the need for additional add-ons.

After: Value-Driven Results

- Since implementation, VESO has altered their routines to work with the standardized SAP Business One's workflow, making life easier for employees.
- There is no longer the requirement to create new fields and UDFs, saving time.
- Onboarding new people in VESO is easier, as everyone now has the same routine.
- Stock Information is now accurate and accessible in real-time.
- Employees will soon be able to check stock, purchase orders and sales orders when visiting customers via the mobile app.

“SAP Business One is a **safe and uniform platform** to access and utilise data. Both SAP and BitPeople provide us with the flexibility and scalability we need to continue growing.”
